## **About me**

19-year-old Programming and System Architecture student at the University of Oslo. I enjoy building my own projects, from an app that shows Spotify lyrics in real time to a Fantasy Premier League tool. I am engaged, eager to learn and sociable, and I am looking for an opportunity to contribute with Python and web development while learning from experienced developers.

## **Education**

### ***Bachelor's in Programming and System Architecture***

University of Oslo

2026 – present (expected graduation 2029)

### ***Information Technology and Media Production***

Elvebakken Upper Secondary School – with Higher Education Entrance Qualification

2023 – 2026

**Elective subjects:** Mathematics R1 and R2, Physics 1, Esports

## **Skills**

**Python:** Proficient

**Web development (HTML, CSS, JavaScript):** Proficient

**Frameworks and tools:** SvelteKit, Flask, pandas, Tkinter, Git, GitHub Actions

**Adobe software (Photoshop, Illustrator, Premiere Pro, After Effects):** Basic

## **Projects**

### ***Portfolio – kavinlokeswaran.no***

SvelteKit, JavaScript, CSS, GitHub API, GitHub Actions

Personal website in Norwegian and English. Automatically pulls in new public GitHub projects and is deployed with GitHub Actions. Features light and dark mode, a contact form and cookie-free visitor analytics, and works well on mobile and with keyboard navigation.

Code: [github.com/KavinLokeswaran/KavinPortfolio](https://github.com/KavinLokeswaran/KavinPortfolio)

## **Spotify Lyric Player**

*Python, Tkinter, Spotify Web API, REST*

Desktop app that shows the lyrics of the song currently playing on Spotify, line by line in real time. Authenticates with OAuth and fetches time-synced lyrics from [lrc.lib.net](https://lrc.lib.net/). The app estimates playback position locally, so lyrics update 10 times per second even though Spotify is only queried every 2 seconds.

Code: [github.com/KavinLokeswaran/spotify\\_lyric\\_player](https://github.com/KavinLokeswaran/spotify_lyric_player)

## **FPL Player Picker**

*Python, Flask, pandas, REST API, HTML/CSS*

Flask app that pulls data from the Fantasy Premier League API and recommends players based on budget, position, form and the difficulty of upcoming fixtures.

Code: [github.com/KavinLokeswaran/FPL\\_player\\_picker](https://github.com/KavinLokeswaran/FPL_player_picker)

## **Experience**

### **Macsimum AS**

*Volunteer, Nordic Infrastructure Conference (NIC) – November 2024*

- Welcomed visitors and collected feedback
- Set up and ran a competition for visitors

## **Languages**

**Norwegian:** Fluent

**English:** Fluent

**Tamil:** Native

## **Interests**

Football (former player at Klemetsrud IL), guitar and languages.
